

TRIMA ACCEL®

AUTOMATED BLOOD COLLECTION SYSTEM VERSION 6.0

Platelet and Plasma Collection Enhancements

Maximize Collections with New Configuration Options

Enhancing the productivity of platelet and plasma collections with streamlined operations, the **Trima Accel system V6.0** allows blood centers to achieve component collection versatility and optimize inventory.

Maximizing collection capabilities, the Trima Accel system V6.0 meets even the most diverse inventory needs, with combinations that include plasma-reduced platelet concentrates (PPCs) diluted by platelet additive solution (PAS)—all on one simple-to-use system.

What is Auto PAS?:¹

- Auto PAS is the automatic addition of the storage solution based on configured yield and plasma carry-over
- PAS provides an alternative to storing platelets in plasma

Increase Productivity with Specially Configured Platelet Products:²

- Ability to qualify a greater number of donors and collect more platelets with 10 platelet configuration options and 20 automated procedure priorities
- Updated platelet post-count algorithm for better correlation between calculated and measured post-platelet donation count, which can improve qualification and product split rate

Optimize Plasma Collections:²

- Collect more concurrent plasma with each PPC donation
- Achieve more accurate loss tracking with on-screen reporting of residual plasma and RBC loss
- Lower residual losses through saline- and plasma-assisted rinseback

Maximize the Benefits of PPCs and Auto PAS:

- Streamline the collection of PPCs and eliminate the need to add PAS manually
- Lower plasma volume in the platelet product

¹The Auto PAS feature is not available in the U.S.

²When compared to earlier versions of the Trima Accel system.

For more information on plasma-reduced platelet concentrates and automatic addition of PAS on the Trima Accel system V6.0, contact your local Terumo BCT representative.
